AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (currently amended): A printing apparatus comprising:

a plurality of print heads;

a moving member that moves along a main-scanning direction and that is provided with

said plurality of print heads;

a feed mechanism that feeds a medium to be printed; and

a drive member that is connected to said moving member at a connecting section and that

drives said moving member along the main-scanning direction;

a controller that makes a predetermined print head, among said plurality of print heads,

eject ink to form dots for correcting a feed amount by which said feed mechanism feeds said

medium to be printed are formed on said medium to be printed, while moving said moving

member, said predetermined print head being a print head other than the print head that is the

furthest away from said connecting section in a direction perpendicular to the main-scanning

direction, among said plurality of print heads;

wherein each of said plurality of print heads has a black nozzle row, a cyan nozzle row, a

magenta nozzle row, and a yellow nozzle row.

2. (original): A printing apparatus according to claim 1,

3

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q77942

Application No.: 10/686,772

wherein said predetermined print head is the print head, among said plurality of print heads, that is the least susceptible to the vibration caused by moving said moving member.

3. (previously presented): A printing apparatus according to claim 1, further comprising:

wherein said predetermined print head is the print head that is located the closest to a

connecting section at which said moving member and said drive member are connected to each

other.

4. (previously presented): A printing apparatus according to claim 3,

wherein the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on edge sections of said medium to be printed by ejecting ink from said predetermined print head, among said plurality of print heads, while moving said moving member.

5. (original): A printing apparatus according to claim 1,

wherein the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed by ejecting ink from predetermined nozzles provided in said predetermined print head.

6. (previously presented): A printing apparatus comprising:

a plurality of print heads;

a moving member that can be moved and that is provided with said plurality of print

heads; and

4

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q77942

Application No.: 10/686,772

a feed mechanism for feeding a medium to be printed;

a support member for supporting said medium to be printed; a suction member for sucking said medium to be printed toward said support member; and

a first detector for detecting a force by which said suction member sucks said medium to be printed;

wherein dots for correcting a feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed by ejecting ink from a predetermined print head, among said plurality of print heads, while moving said moving member, and

wherein said predetermined print head is a print head other than the print head, among said plurality of print heads, that is the most susceptible to vibration caused by moving said moving member,

wherein whether or not to form, on said medium to be printed, the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed is determined according an output value of said first detector.

7. (previously presented): A printing apparatus according to claim 1,

wherein whether or not to form, on said medium to be printed, the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed is determined according at least one of:

a value of a temperature around said printing apparatus and

a value of a humidity around said printing apparatus.

Attorney Docket No.: Q77942

AMENDMENT UNDER 37 C.F.R. § 1.116

Application No.: 10/686,772

8. (original): A printing apparatus according to claim 1,

wherein the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed when power is supplied to said printing apparatus.

9. (original): A printing apparatus according to claim 1,

wherein the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed during a printing operation of said printing apparatus.

10. (original): A printing apparatus according to claim 1,

wherein the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed when said medium to be printed has been exchanged.

11. (previously presented): A printing apparatus according to claim 10, further comprising:

a detector for detecting whether or not said medium to be printed has been exchanged; wherein when it has been detected by said detector that said medium to be printed has been exchanged, the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed.

12. (original): A printing apparatus according to claim 1,

Attorney Docket No.: Q77942

AMENDMENT UNDER 37 C.F.R. § 1.116

Application No.: 10/686,772

wherein the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed when a print mode of said printing apparatus has been changed.

13. (original): A printing apparatus according to claim 1,

wherein at least two correction amounts for correcting the feed amount by which said feed mechanism feeds said medium to be printed are obtained based on said dots formed on said medium to be printed, and

wherein, based on an average value of said correction amounts that are obtained, the feed amount by which said feed mechanism feeds said medium to be printed is corrected.

- 14. (original): A printing apparatus comprising:
- a plurality of print heads;
- a moving member that can be moved and that is provided with said plurality of print heads; and
 - a feed mechanism for feeding a medium to be printed;

wherein dots for correcting a feed amount by which said feed mechanism feeds said medium to be printed are formed on both edge sections of said medium to be printed by ejecting ink from a

predetermined print head, among said plurality of print heads, while moving said moving member;

wherein said predetermined print head is the print head, among said plurality of print heads, that is the least susceptible to vibration caused by moving said moving member;

Attorney Docket No.: Q77942

AMENDMENT UNDER 37 C.F.R. § 1.116

Application No.: 10/686,772

wherein said printing apparatus further comprises a drive member that is connected to said moving member and that is for driving said moving member;

wherein said predetermined print head is the print head that

is located the closest to a connecting section at which said moving

member and said drive member are connected to each other; wherein said printing apparatus further comprises:

a support member for supporting said-medium to be printed;

a suction member for sucking said medium to be printed toward said support member;

and

a detector for detecting a force by which said suction member sucks said medium to be printed;

wherein whether or not to form, on said medium to be printed, the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed is determined according an output value of said detector; and

wherein whether or not to form, on said medium to be printed, the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed is determined according at least one of

- a value of a temperature around said printing apparatus and
- a value of a humidity around said printing apparatus.
- 15. (previously presented): A printing apparatus according to claim 1, further comprising:
 - a detector for detecting whether or not said medium to be printed has been exchanged;

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q77942

Application No.: 10/686,772

wherein when it has been detected by said detector that said medium to be printed has been exchanged, the dots for correcting the feed amount by which said feed mechanism feeds said medium to be printed are formed on said medium to be printed.

16. (canceled).

17. (previously presented): The printing apparatus according to claim 1, wherein the driving member extends along the moving member in the main scanning direction.

9
